

# PROGRAM MANAGEMENT

Program management services provide structured oversight of multiple projects, ensuring they align with an organization's goals. This approach bridges the gap between strategy and execution, helping organizations manage risk, optimize resources, and drive long-term success.

In the public sector, effective program management is critical. Government agencies face unique challenges when adopting new technology, including regulatory constraints, outdated systems, and complex stakeholder environments. Without proper oversight, projects can become inefficient, costly, or fail to meet objectives.

Corvano stands out with its adaptive, outcome-driven approach. By integrating business process analysis, vendor management, and technical oversight, Corvano helps public institutions navigate modernization successfully.

## Why Program Management Matters in Public Sector Tech Adoption

Public sector technology projects are large and complex, involving multiple teams, vendors, and regulations. Corvano provides a structured framework to keep initiatives on track, ensuring they stay within scope, budget, and timeline. Strict regulatory and security requirements demand careful oversight. Corvano ensures compliance with state and federal guidelines while proactively managing risks that could disrupt progress.

Successful projects require strong stakeholder alignment, from government leaders to IT teams and end users. Corvano fosters clear communication and collaboration to keep everyone on the same page. A major challenge in tech adoption is user resistance to change. Corvano helps organizations drive adoption through training, communication strategies, and phased rollouts, ensuring new systems are embraced and effectively utilized.

## Corvano's Flexible Program Management Model

Corvano's approach is built on flexibility, adapting to the unique challenges of each agency. Instead of a one-size-fits-all solution, Corvano tailors its methodology based on specific needs—whether providing full program oversight or stepping in to support struggling initiatives.

### Strategic Planning & Roadmap Development

Aligning IT initiatives with business goals.

### Governance & Compliance Oversight

Ensuring projects meet public sector standards.

### Vendor & Partner Coordination

Managing third-party relationships effectively.

### Business Process Optimization

Identifying inefficiencies and streamlining operations.

### Change Management & Training

Ensuring user adoption and minimizing disruption.

Corvano's solutions seamlessly integrate with other services, including Independent Verification & Validation (IV&V) and Mulesoft, ensuring comprehensive support for public sector transformations.

## Why Partner with Corvano?

Partnering with Corvano means working with a team that brings **proven public sector experience**, backed by a strong track record in government technology programs. Corvano is **outcome-oriented and risk-focused**, proactively identifying potential challenges and making strategic adjustments to keep projects on course. With **adaptable and scalable solutions**, Corvano can step in at any phase of an initiative, providing the flexibility needed for complex public sector programs. Additionally, Corvano's **cross-functional** expertise ensures a holistic approach, seamlessly integrating Independent Verification & Validation (IV&V), system integration, and business process analysis to drive successful outcomes.

## Case Studies and Real World Impact

### Modernizing Pension Management Systems

**Objective:** A state public retirement system struggled with an outdated case management process.

**Solution:** Corvano provided program oversight, vendor coordination, and user training.

**Outcome:** A successful deployment of a Service Cloud CRM system, improving operational efficiency.

### Large-Scale Government IT Transformation

**Objective:** A state agency lacked the internal expertise to manage a critical modernization effort.

**Solution:** Corvano delivered structured program oversight, risk management, and compliance assurance.

**Outcome:** Smooth adoption of new digital services with controlled costs and minimized risks.

**Schedule a no-risk,  
no-cost assessment**
